

TAMIL NADU STATE BOARD - STANDARD 12 MATHEMATICS VOLUME 1

CHAPTER 2: COMPLEX NUMBERS

PREMIUM ACADEMIC STUDY SUITE & EXAM GUIDE

Board:	Tamil Nadu State Board (TNSB)
Syllabus:	Samacheer Kalvi Textbook Curriculum aligned
Standard:	Class 12 English Medium
Subject:	Mathematics Volume 1
Chapter Name:	Complex Numbers

Learning Objectives:

- Comprehend core theoretical concepts and exact textbook terminology.
- Apply relevant formulas and proofs to solve high-scoring board problems.
- Interpret and sketch vector diagrams or graphical models representing equations.
- Build examination readiness for 1-mark, 2-mark, and 5-mark question sets.

Function Mapping Diagram

Core Concepts & Definitions

Textbook definitions are essential for scoring fully in the short-answer section of board assessments. Review the primary definitions below:

Term	Official Definition & Context
Complex Number	A number of the form $z = x + iy$, where x and y are real numbers and $i = \sqrt{-1}$ is the imaginary unit.
Conjugate of Complex Number	The complex number $z^* = x - iy$ obtained by changing the sign of the imaginary part of $z = x + iy$.
Argand Diagram	A geometric representation of complex numbers as points or position vectors in a Cartesian plane.

Syllabus Exam Tip: Memorize precise keywords. Examiners award maximum marks when textbook terms and correct symbols are correctly referenced.

Venn Diagram: $A \cap B$

Detailed Explanation & Formulas

Here, we analyze the core laws and formulas. Examine the conceptual illustration below to visual the relation between variables:

Essential Formulas, Laws & Identities:

- Modulus: $|z| = \sqrt{x^2 + y^2}$
- Polar Form: $z = r(\cos(\theta) + i\sin(\theta))$ where $r = |z|$ and $\theta = \text{Arg}(z)$
- De Moivre Theorem: $(\cos(\theta) + i\sin(\theta))^n = \cos(n\theta) + i\sin(n\theta)$
- Euler Form: $z = r \cdot e^{i\theta}$

Make sure to check the dimensional consistency of all physical quantities and verify that units are correctly stated in final solutions.

Worked Examples

Review these standard board examination-style worked examples to learn proper step layout structures:

Example 1: Express $1 + i\sqrt{3}$ in polar form.

Step-by-step Solution:

Modulus $r = \sqrt{1^2 + (\sqrt{3})^2} = \sqrt{1 + 3} = 2$.

Argument $\theta = \tan^{-1}(\sqrt{3} / 1) = \pi/3$.

Polar form: $2(\cos(\pi/3) + i\sin(\pi/3))$.

Linear Algebraic Matrix Representation

$$\begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \end{bmatrix}$$

HOTS (Higher Order Thinking Skills) Challenge

Challenge yourself with these complex, multi-concept problems designed to test deeper conceptual understanding and mathematical reasoning:

HOTS Challenge 1: Find the cube roots of unity and show they form an equilateral triangle in the Argand plane.

Analytical Solution Strategy:

Cube roots are 1, $w = e^{(i*2\pi/3)}$, $w^2 = e^{(i*4\pi/3)}$.

The points are $(1,0)$, $(-1/2, \sqrt{3}/2)$, $(-1/2, -\sqrt{3}/2)$.

Distances between these points are all equal to $\sqrt{3}$, proving they form an equilateral triangle.

Right-Angled Triangle Geometry

Practice Worksheet

Test your skills by attempting these sample exam problems independently. Draw diagrams where appropriate:

Q1 (1-Mark): Find the real and imaginary parts of $(2 + 3i) / (1 - 2i)$.

Q2 (2-Mark): State the geometric meaning of multiplying a complex number by i .

Q3 (2-Mark): If z_1 and z_2 are two complex numbers, show that $|z_1 + z_2| \leq |z_1| + |z_2|$.

Q4 (5-Mark): Evaluate the value of $i^{100} + i^{101} + i^{102} + i^{103}$.

Q5 (5-Mark): Solve the complex quadratic equation: $z^2 + z + 1 = 0$.

Circle with Radius Vector on Plane

Real-World Applications & Connections

This chapter connects directly with modern industrial engineering, computation, and natural systems in numerous ways:

Application Case: Electrical Grid Analysis

Alternating current impedance and voltages are analyzed as complex vectors, simplifying phase addition.

Application Case: Fractal Generation

Complex coordinates calculate Julia and Mandelbrot sets in structural chaos theory animations.

Cross-Curricular Link: Concepts learned in this unit are heavily applied in other subjects like Physics (equations of motion, field vectors) and Data Analytics.

3D Vector Projections (x, y, z)

Revision Summary & Strategy

Use this checklist to self-evaluate your exam preparation status before final tests:

Key Recall Tips:

- ✓ Always write down 'Given Parameters' first to ensure partial marks are locked in.
- ✓ Pay attention to signs (+ / -) when performing algebraic operations or force mappings.
- ✓ Check that you have written the correct units (e.g. Joules, Tesla, cm^3 , N) for the final numeric answer.
- ✓ Draw neat diagrams using a sharp pencil and ruler for geometry or circuit layouts.

Syllabus Checklist:

- ☐ Read and memorized core definitions on Page 2.
- ☐ Reviewed critical formulas and relations on Page 3.
- ☐ Solved worked examples on Page 4.
- ☐ Attempted worksheet problems on Page 6.

CONGRATULATIONS! YOU HAVE COMPLETED THIS SYLLABUS STUDY GUIDE!

Practice consistently, verify answers with standard textbook methods, and take the topic test in the Nexora Learning app to gauge progress.
Good luck!
