

TAMIL NADU STATE BOARD - STANDARD 12 MATHEMATICS VOLUME 2

CHAPTER 12: DISCRETE MATHEMATICS

PREMIUM ACADEMIC STUDY SUITE & EXAM GUIDE

Board:	Tamil Nadu State Board (TNSB)
Syllabus:	Samacheer Kalvi Textbook Curriculum aligned
Standard:	Class 12 English Medium
Subject:	Mathematics Volume 2
Chapter Name:	Discrete Mathematics

Learning Objectives:

- Comprehend core theoretical concepts and exact textbook terminology.
- Apply relevant formulas and proofs to solve high-scoring board problems.
- Interpret and sketch vector diagrams or graphical models representing equations.
- Build examination readiness for 1-mark, 2-mark, and 5-mark question sets.

Function Mapping Diagram

Core Concepts & Definitions

Textbook definitions are essential for scoring fully in the short-answer section of board assessments. Review the primary definitions below:

Term	Official Definition & Context
Binary Operation	A rule $*$ on set A mapping every ordered pair (a,b) to a unique element c in A , closed under $*$.
Tautology	A composite statement or logical proposition that is always true for all truth values of its constituents.
Monoid	An algebraic structure consisting of a set closed under a binary operation that is associative and contains an identity element.

Syllabus Exam Tip: Memorize precise keywords. Examiners award maximum marks when textbook terms and correct symbols are correctly referenced.

Venn Diagram: $A \cap B$

Detailed Explanation & Formulas

Here, we analyze the core laws and formulas. Examine the conceptual illustration below to visual the relation between variables:

Essential Formulas, Laws & Identities:

- Closure Property: $a * b$ in A for all a, b in A
- Logical Implication: $p \rightarrow q$ is equivalent to $(\sim p \vee q)$
- De Morgan's logical laws: $\sim(p \vee q) = \sim p \wedge \sim q$ | $\sim(p \wedge q) = \sim p \vee \sim q$

Make sure to check the dimensional consistency of all physical quantities and verify that units are correctly stated in final solutions.

Worked Examples

Review these standard board examination-style worked examples to learn proper step layout structures:

Example 1: Check closure of multiplication on set $A = \{-1, 1\}$.

Step-by-step Solution:

$(-1)*(-1)=1$, $(-1)*1=-1$, $1*1=1$. All results are in A. Closed.

Linear Algebraic Matrix Representation

$$\begin{bmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \end{bmatrix}$$

HOTS (Higher Order Thinking Skills) Challenge

Challenge yourself with these complex, multi-concept problems designed to test deeper conceptual understanding and mathematical reasoning:

HOTS Challenge 1: Construct a truth table to show that $\sim(p \rightarrow q)$ is logically equivalent to $p \wedge \sim q$.

Analytical Solution Strategy:

Columns: p , q , $\sim q$, $p \rightarrow q$, $\sim(p \rightarrow q)$, $p \wedge \sim q$.

For (T,T): $p \rightarrow q = T$, $\sim(p \rightarrow q) = F$, $p \wedge \sim q = F$.

For (T,F): $p \rightarrow q = F$, $\sim(p \rightarrow q) = T$, $p \wedge \sim q = T$.

For (F,T): $p \rightarrow q = T$, $\sim(p \rightarrow q) = F$, $p \wedge \sim q = F$.

For (F,F): $p \rightarrow q = T$, $\sim(p \rightarrow q) = F$, $p \wedge \sim q = F$.

Truth values match, showing logical equivalence.

Right-Angled Triangle Geometry

Practice Worksheet

Test your skills by attempting these sample exam problems independently. Draw diagrams where appropriate:

Q1 (1-Mark): Define binary operation and write its closure condition.

Q2 (2-Mark): Show that addition is not a binary operation on odd numbers.

Q3 (2-Mark): Construct truth table for $p \vee \sim p$ (Tautology).

Q4 (5-Mark): State what is a contradictions statement in logical structures.

Q5 (5-Mark): Test associativity of operation $a * b = a + b + ab$ on integers.

Circle with Radius Vector on Plane

Real-World Applications & Connections

This chapter connects directly with modern industrial engineering, computation, and natural systems in numerous ways:

Application Case: Logic Circuits

Microprocessor CPU logic gates implement binary arithmetic via Boolean truth tables.

Application Case: Compiler Verification

Compiler logical expressions are optimized using tautology equivalence rules.

Cross-Curricular Link: Concepts learned in this unit are heavily applied in other subjects like Physics (equations of motion, field vectors) and Data Analytics.

3D Vector Projections (x, y, z)

Revision Summary & Strategy

Use this checklist to self-evaluate your exam preparation status before final tests:

Key Recall Tips:

- ✓ Always write down 'Given Parameters' first to ensure partial marks are locked in.
- ✓ Pay attention to signs (+ / -) when performing algebraic operations or force mappings.
- ✓ Check that you have written the correct units (e.g. Joules, Tesla, cm^3 , N) for the final numeric answer.
- ✓ Draw neat diagrams using a sharp pencil and ruler for geometry or circuit layouts.

Syllabus Checklist:

- ☐ Read and memorized core definitions on Page 2.
- ☐ Reviewed critical formulas and relations on Page 3.
- ☐ Solved worked examples on Page 4.
- ☐ Attempted worksheet problems on Page 6.

CONGRATULATIONS! YOU HAVE COMPLETED THIS SYLLABUS STUDY GUIDE!

Practice consistently, verify answers with standard textbook methods, and take the topic test in the Nexora Learning app to gauge progress.
Good luck!
